

Project Profile Roof Deck Waterproofing

This hotel needed a solution for this leaky and worn concrete roof / deck.

ADVANCED Polymer Repairs was called in because of their long track record of solving many of this hotel's toughest surface protection problems. The deck experienced high foot traffic during the summer so the coating specified not only had to seal the leaks but had to be tough enough to take the abuse of party goers dancing and enjoying themselves.

The system **ADVANCED** specified was installed by in house personnel in only a day. The hotel was very happy with the result.
